

Dispenses safely and accurately.

Dispensing Bottle is constructed of polyethylene with a stainless steel wire that allows stem to be shaped to reach "hard-to-get-at" areas. Dispense flammable liquids directly on small components or subassemblies with a minimum of overspray. Airtight design reduces spillage.

Bottle Jacket This unique product gives you the added protection of a polyethylene bottle without contaminating high-purity solvents. Lab bottles fit in to the bottom half of the cover and lid twists securely for safe pouring. Jacket also acts as a shock absorber, minimizing breakage and spills due to bumps or falls.

Dispensing Bottles and Bottle Jacket
